

CellTrust SecureLine on Samsung KNOX

A Complete Mobile Office with Secure Voice and Secure SMS

CellTrust SecureLine™ on Samsung KNOX delivers a powerful enterprise mobility platform, allowing employees to work on the go—with easy access to secure business applications, voice and text messaging on their hardened Samsung device.

As workforce mobility becomes more prevalent due to the flexibility and productivity it enables, so do threats to corporate assets, privacy, confidentiality and regulatory obligations, specifically with the rise of BYOD and need for smarter controls. That's why Samsung and CellTrust partnered to deliver a complete mobility solution for enterprises to holistically take control of their devices, applications and mobile communications.

Samsung KNOX's advanced controls empower organizations to monitor and manage Samsung-issued devices while CellTrust SecureLine delivers secure mobile communications in support of industry regulations and IT protocol to fully empower the mobile workforce.

CellTrust SecureLine on Samsung KNOX Delivers:

Integrated Business Communications

- + Contacts

- + Business app workflow ready

Compliance Lockdown & Administrative Control

- + Disable Android messaging
- + Turn off SMS with carrier
- + Remote wipe of business data, personal data untouched
- + Personal email and apps accessible only outside of Samsung KNOX

DESIGNED FOR ORGANIZATIONS THAT:

Manage Samsung devices

Need mobile device management

Are looking for a complete mobile solution with secure voice and secure SMS

Hardware-anchored mobile security

Samsung KNOX provides resilient mobile data protection by safeguarding the integrity of the entire device, from the hardware to the application layer—all without invading employee privacy with the separation of personal and business data.

One device. Two personas.

Employees can easily switch between the password-protected work container and personal apps with the freedom to customize their device for optimal user experience. Mobile business communications are secure and archived, and IT can be confident that all company data is protected.

Tailored security access

Samsung KNOX protects sensitive data with identification measures such as fingerprint scanners, swipe patterns, and security PINs or passwords. Easy to manage and deploy across the organization, Samsung KNOX eliminates OS compromise, letting administrators monitor and control devices on the network across multiple mobile service providers.

Mobile device management integration

KNOX Workspace can easily integrate with existing mobile device management, VPN and Microsoft Exchange ActiveSync to accelerate deployment. Email, voice calls and text messages are secured throughout the entire mobile workflow, protecting data shared between KNOX-secured apps and restricting data exposure to unapproved applications.

Secure messaging—stamp, track, log and archive text messages

Mobile device use for work is a growing concern among employers, specifically texting, which is favored by most employees for its convenience and immediate reach. The CellTrust SecureLine app encrypts all text messages exchanged in the Samsung KNOX environment to protect, archive and assure delivery of employee's business text messages.

Secure voice—separation of business and personal calls

The CellTrust SecureLine app captures all incoming and outgoing calls made within the Samsung KNOX environment, providing audio recordings to help meet supervision and compliance needs. Now it's possible for businesses to allow employees to bring their own device—and be in support of compliance.

We're ready to help you meet evolving enterprise security needs with CellTrust SecureLine on Samsung KNOX to:

- Separate enterprise and personal data with enhanced technology secure enough to run on government-grade networks
- Protect and archive sensitive data in support of regulatory compliance
- Empower your workforce with a complete mobile office and secure mobile communications, anywhere
