

CELLTRUST SL2™

Helping BYOD Mobile Compliance Enforcement

Take control of business communications by encrypting, tracking and archiving voice and text messages

As workforce mobility becomes more prevalent due to the flexibility and productivity it enables—so do threats to corporate assets, privacy, confidentiality and regulatory obligations—specifically with the rise of BYOD and need for smarter controls. That’s why organizations turn to CellTrust SL2™, which offers voice and text messaging that can be secured, archived and traced.

BUSINESS

Secure Calls & SMS

Patented SecureSMS™ and SecureVoice™ ensure communications are time and date stamped, tracked, logged and archived to help safeguard the enterprise.

Separate MBN

Makes seamless BYOD deployments possible by assigning a separate Mobile Business Number (MBN) on iOS and Android devices enabling business calls to be made on the MBN instead of the users’ personal number.

Compliance

Keep up with evolving regulations with the ability to preserve, extract and search business communications on mobile devices for related eDiscovery compliance.

Safeguard Assets

The company controls the MBN assigned to the device. If an employee leaves, the business number and associated contacts stay with the company.

PERSONAL

Personal Data

Enables selective wiping so that only business data is deleted. Personal data and apps on BYO devices remain untouched.

Employee Choice

Empower employees to work where, when and how they choose for maximum flexibility and productivity.

Real-Time Exchanges

Receive messages in real time, including automatic notifications with a complete audit trail of when messages are sent, delivered, opened and answered.

User Experience

Enhanced user experience helps drive employee adoption, enables productivity and reinforces a positive mobile experience for enterprise BYOD success.

Secure messaging – stamp, track, log and archive text messages

All text messages sent using the app are time and date stamped, tracked, logged and can be archived for eDiscovery. The dual persona feature allows organizations to apply policies—such as data erasure and archiving only to the business data—as opposed to other solutions that archive at the carrier level or use device syncing, where all communication data from the device is archived.

Archiving – secure reporting, audit trails and traceability

In today’s highly connected world, where we can easily make a call or send a message with sensitive business or personal information, it is critical to protect and archive business mobile communications. To help mitigate risk and respond to eDiscovery and compliance demands, CellTrust SL2™ offers comprehensive reporting, audit trails, traceability and archiving. Also, all administrative and operator activities are logged for server audit trails, and intrusion attempts are logged for intrusion detection reports.

Secure voice – manage work and personal voice calls on a single device

Patented SecureVoice™ captures all incoming and outgoing calls made on a mobile device and provides audio recordings to help meet supervision and compliance needs. Now it’s possible for businesses to issue their workforce with an Apple iOS™ based or Android™ based mobile phone, or allow employees to bring their own devices—and be in support of compliance.

Desktop client – seamless and secure from mobile to desktop

CellTrust understands that BYOD success starts and ends with the user. That’s why CellTrust SL2™ offers a desktop client that delivers both secure messaging functionality and calling capability, in parallel with the mobile application. Our user-centric management allows employees to have their account on more than one device with the ability to securely connect and communicate with messaging systems at remote office locations via both BYOD and the desktop.

The following industries benefit from CellTrust SecureLine

Whether it’s allowing your vast network of financial services professionals to engage in secure mobile business conversations, next-generation paging capabilities for healthcare providers, or ensuring staff privacy in accordance with federal and local regulations—CellTrust offers tailored solutions for the following highly regulated industries.

Financial

Healthcare

Government

Energy

Enterprise
